APS Simplifies Medication Delivery While Providing Safe, Quality Patient Care

- Physician Orders CPOE
- Skin and Wound Assessment
- MDS and eMAR/eTAR
- Patient Status Alerts
- Drug Inventory Tracking
- Automatic Drug Reorder
- Care Plans
- ADLs

World Class Medication Delivery To Your Loved Ones

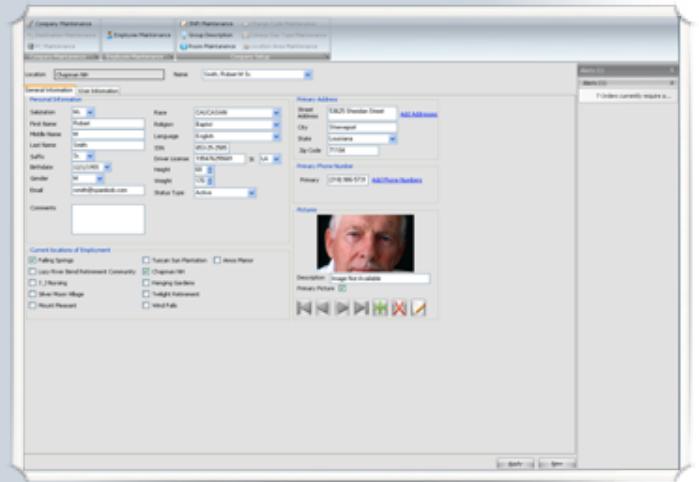

For those who are responsible for providing safe, quality patient care, APS's patented dispensing system is unique because of its automated dispensing of 110 oral, solid medications. This one-of-a-kind distribution system transforms the medication cart into a combination of pharmacy, nursing home and physician's office. APS simplifies medication delivery, while providing secure, accurate services in an all-in-one solution.

Safety, Privacy, Compliance

With the cart's mobility, medications are immediately available to the nurse for administration. APS allows an order to be filled as needed at bedside, eliminating the waste of drugs. An order is not filled until it is dispensed, so drugs are not stocked per patient.

• Improves accountability and patient safety.

- Documents medication administration and dispense time with one-click, electronic signature.
- Selects medication in cart based on the residents' current medication profiles.
- Enforces required documentation on PRN medications (need and result of drug).
- Reduces drug waste.

For safety, the technology automatically documents missed doses and uses photo identification to confirm patient information and drug dispensation. The system also displays drug images, if available, and alerts the user if a drug conflicts with the patient's allergies.

Clinical Documentation and CNA Charting

Vital Signs

weight, respirations, blood pressure and sugar, and pulse

Vaccines and Injections

subcutaneous, intramuscular, flu

Intakes

IV, flush intake, enteral NG/GT and oral intake

Output

loose stool, urine, edema and emesis

Assessments

fall risk, bowel and bladder, Braden scale, and skin and wound

Pharmacy Care

Each chart is tied directly to the pharmacy, automating medication filling and packaging based on each patient's current medication profile. All medications are labeled individually at the pharmacy with an expiration date and lot number. APS's common database eliminates transcription errors and incorporates e-Prescribing in the physician's office.

- Verifies medication with pharmacist during filling and packaging in pharmacy.
- Eliminates labor, time, and errors associated with transferring physician orders to the MAR.
- Reduces need of back-up pharmacies and extra deliveries. With APS, pharmacists may fill prescriptions off-site, expediting patient orders and automatic drug inventory. Direct communication to the pharmacy eliminates the need for returned medication and associated labor.

The screenshot displays the APS software interface. On the left, a detailed prescription form is shown for a patient named Wilson, Paul. The prescription is for Flomax 0.4 mg capsule, SA, QD, with a time code of 8PM. It specifies 'Give 1 cap PO QHS DO NOT CRUSH' and includes a note 'Ronox'. The dispensing information indicates it is for Mr. Reggie T... and 12,000 units are dispensed per sign-off. A photo of the patient is displayed next to the prescription. On the right, a medication administration record (MAR) is shown for patient Shawna S-ZIA. The MAR lists various medications with their dosages, frequencies, and times. It includes a photo of the patient, a list of allergies, and a section for sign-offs. The interface is filled with various icons and status indicators typical of a medical software environment.

Highlights

Current

Adheres to the most up-to-date HL7 and NCPDP standards and safeguards.

Flexible

Offers previously composed or fixed care plans.

Allows for 7, 14, or 30-day MAR view.

Secure

Originates at pharmacy and is sealed and programmed with the medication, lot number, GCN and NDC CODES, and trip points.

Connected

Connects with other healthcare softwares.

An Absolute ADVANTAGE

APS saves time, reduces waste, decreases labor costs, and promotes safety.
